

## Job Description

# Software Development Engineer – II

## About Elecbits

Elecbits is a tech-enabled B2B platform that helps Electronics Enterprises to go from an idea to a shelf ready, commercial Electronics Product. We cover the end-to-end intricacies involved in the Electronics product development & manufacturing cycle using 25+ micro-services on our platform.

We are proud to have worked with more than 100 eminent enterprises, digitizing their product development and manufacturing lifecycle. Some notable names are Ola Electric, Urban Company, Maruti Suzuki, Bosch, V-guard, Luminous, Phone pe, Escorts Kubota, Napino, etc. We are the largest B2B Electronics development and manufacturing platform of its kind, having more than 3000 global Electronics manufacturers and suppliers on our platform.

### Key Responsibilities:

- Architect and build robust, scalable web applications using the MERN stack.
- Write clean, maintainable code in TypeScript/JavaScript.
- Develop intuitive, responsive UIs using Tailwind CSS, Material UI, and React hooks.
- Integrate APIs, internal microservices, and third-party platforms
- Collaborate with designers to convert wireframes into pixel-perfect interfaces.
- Own the full development lifecycle — from ideation to deployment and post-launch monitoring.
- Optimize for performance, security, and scalability.
- Participate in code reviews, tech discussions, and continuous improvement initiatives.
- Partner with Engineering, Design, QA, and Operations teams to deliver high-quality features through agile methodology.
- Facilitate sprint planning, backlog grooming, and sprint reviews ensuring smooth execution and alignment.
- Anticipate and proactively address potential risks, blockers, or resource challenges during the delivery cycle.
- Conduct retrospective sessions to identify improvement areas and enhance cross-team collaboration.
